Summary

Full-Stack Software Engineer experienced in building production applications with Node.js, Express, React, and PostgreSQL. Experienced in REST API design, authentication and RBAC, database transactions, caching, rate limiting, concurrency control, automated testing, and third-party integrations.

Experience

Software Engineer Aug 2025 – Present
BHSquare *Surat, Gujarat, India*

- Architected and built a production Solar Installation CRM using Node.js/Express, React 19, and PostgreSQL/Sequelize, spanning 187 REST API endpoints, a 46-table relational schema, and 5 role-based dashboards.
- Designed a lead lifecycle pipeline (pending → delayed → converted → cancelled) with backend authorization and state validation to prevent invalid business-state transitions.
- Implemented ACID transactions and row-level locking for critical workflows; validated stock deduction under 120 concurrent requests with zero overselling using Jest concurrency tests.
- Implemented API caching for frequently accessed resources and applied rate limiting to protect APIs from excessive traffic and repeated database queries.
- Implemented concurrency controls and race-condition handling for critical operations, improving reliability under simultaneous requests.
- Integrated Google Drive API via OAuth2 for automated customer document management and generated legal agreements using Docxtemplater.
- Optimized database access patterns and API workflows to reduce unnecessary queries and improve response performance across high-traffic CRM operations.
- Standardized service-layer validation and error-handling patterns across backend modules, improving consistency and maintainability of business workflows.

Software Engineer Intern Jan 2025 – May 2025
Casepoint LLC *Surat, Gujarat, India*

- Developed backend modules and REST APIs for vehicle booking and user management using layered architecture.
- Refactored data-access logic and optimized SQL Server stored procedures, reducing API latency by 25%.
- Built Kendo UI admin dashboards and delivered production features across 2-week Agile/Scrum sprints.

Projects

MakesEasy – Community Platform makeseasy.in
ASP.NET Core, .NET 9, React, Redux, PostgreSQL, JWT

- Built an ASP.NET Core / .NET 9 backend with React and Redux, implementing stateless JWT authentication and location-scoped authorization across village, taluka, and district levels.
- Implemented SHA-256 OTP verification, single-use enforcement, API rate limiting, and atomic password-reset flows using single-use GUID tokens to prevent replay and abuse.

Academy CRM – Academy Management System academy-crm-frontend.vercel.app
Node.js, Express, React, PostgreSQL, Razorpay, Socket.io

- Architected a 4-layer backend (Routes → Controllers → Repository → PostgreSQL) with RBAC enforced across frontend and backend.
- Integrated Razorpay payments, QR-verifiable certificate generation, and Socket.io real-time updates across a 74-component React frontend.

Smart Ride – Community Ride Platform smart-ride-glit.vercel.app
Node.js, PostgreSQL, Sequelize, OpenRouter LLM

- Developing ride posting, discovery, driver/rider profiles, live trip tracking, and ride/driver matching workflows.
- Implemented an LLM pipeline that converts multilingual free-text listings into structured booking data with automatic recovery for malformed model responses.

Technical Skills

Languages: JavaScript, C++, C#, SQL
Frontend: React, Redux Toolkit, Tailwind CSS, PrimeReact, Vite
Backend: Node.js, Express.js, ASP.NET Core, .NET 9, REST API Design
Databases: PostgreSQL, SQL Server, Sequelize, Transactions, Row-Level Locking
Performance & Reliability: Caching, Rate Limiting, Concurrency Control, Race-Condition Handling
Security & Testing: JWT, OAuth2, RBAC, OTP, Jest, Unit Testing, Concurrency Testing
Integrations & Tools: Google Drive API, Razorpay, Socket.io, OpenRouter, Git, Swagger/OpenAPI, Vercel, Render

Education

Bachelor of Engineering in Computer Science 2025
Gujarat Technological University CGPA: 8.44 / 10.0 | 350+ LeetCode Problems Solved
